EXPERIENCE

CRM & Data Management Associate Dec 2025 - Present
Mid-Hudson Energy Transition Kingston, NY

- Configure and automate HubSpot workflows and pipelines that handle data cleanup, reporting, and documentation, replacing manual processes.
- Audited CRM data models (contacts, companies, custom properties, pipelines) and built an Excel audit that prioritizes data-quality fixes.
- Gathered requirements from non-technical teams and translated them into system changes; documented decisions and edge cases for future maintainers.

Software Engineering Fellow June 2024 - August 2024
Headstarter New York, NY

- Developed and deployed multiple full-stack web applications with React, Next.js, Firebase, Clerk, and Vercel in weekly sprints.
- Collaborated in a four-person team on planning, design, coding, and testing; participated in code reviews and discussions.
- Used Git, CI/CD pipelines, and testing practices to ship reliable updates.

AI Evaluation Contractor June 2024 - March 2025
Outlier AI Remote

- Tested AI systems through benchmarking and structured edge-case analysis, documenting reproducible failures and suggested fixes.
- Recorded evaluation steps and results clearly and consistently across a high volume of tasks.

MakerSpace Intern September 2023 - May 2024
Vassar Innovation Lab Poughkeepsie, NY

- Kept lab technology and tools running reliably; troubleshot and resolved technical issues for students and faculty.
- Wrote standard operating procedures and documentation that improved onboarding and troubleshooting.

PROJECTS

StudifyAI | React, Next.js, Firebase, OpenAI API, Stripe | ai-studify.vercel.app | github.com/Chris-203

- Built a full-stack SaaS app that generates AI flashcards, with user authentication, subscription billing, and usage analytics.
- Designed cloud-hosted database schemas and implemented and tested payment and usage-tracking logic.
- Automated deployments with Git and CI/CD workflows on Vercel.

RateMyProfessorAI | React, Next.js, Pinecone, Clerk, Python | rate-my-professor-nu.vercel.app

- Contributed to a retrieval-augmented generation (RAG) search tool over professor and course data using a vector database.
- Built frontend features and backend data workflows; wrote Python web-scraping scripts that expanded the dataset and improved query relevance.

Toxiscan | React, Next.js, Material-UI, Clerk | toxiscan-app.vercel.app | github.com/Chris-203

- Designed and deployed a web app using the Open Food Facts API to analyze food health and environmental risk.
- Implemented secure authentication, responsive UI components, and analytics dashboards; tested data flows and UI behavior for accurate real-time results.

Machine Translation Comparative Analysis | Python, Hugging Face, Pandas

- Built Python pipelines to preprocess multilingual datasets and fine-tune transformer translation models.
- Evaluated models with BLEU and ROUGE and proposed data-driven improvements.

EDUCATION

Vassar College
B.A., Computer Science and Italian. Poughkeepsie, NY

Coursework: Algorithms, Software Design, Theory of Computation, Classical AI, Computational Linguistics.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL, MySQL, HTML5, CSS3, OCaml

Frontend: React, Next.js, Material-UI, responsive web design, single-page applications, user interface development

Backend & Data: Node.js, REST APIs, API design and integration, Firebase (Firestore), MySQL, database schema design, authentication and authorization, Pinecone (vector database)

Integrations & AI: OpenAI API, Stripe, Clerk, RAG pipelines, LLM applications, Hugging Face Transformers, NLP

Practices & Tools: Git, GitHub, pull requests, code review, CI/CD, Vercel (cloud deployment), Agile/Scrum, sprint planning, software testing, debugging, object-oriented programming, data structures and algorithms, technical documentation, Jupyter
